

\$PAC Governance Monitoring

Proposal

Governance for \$PAC-related Projects

Decentralized Governance by Blockchain allows the community to be involved in the decision-making regarding projects related to \$PAC. Masternodes are the main actors in the governance process, they can create new proposals and vote (yes/no/abstain) on existing proposals. Each time a block is generated, 75% of the block reward goes to the Masternode network, 5% goes to the miners and then, once every 16,616 blocks (approximately 30.3 days) a ‘Superblock’ is generated containing the entire 20% payout to the proposals winners of the previous cycle. Anyone can vote or make proposals. A proposal wins only if the approval is greater than the 10% of the total masternode count at that time.

The community vote will decide on what improvements and programs the development team focuses on. The current break down is that 15% of the block reward is for operations, and 5% is destined for charity.

Masternode holders will then allocate resources and time to these proposed programs and projects.

How can I vote?

- Open your \$PAC core wallet and under Tools click Debug Console
- Copy and paste the command below:

```
gobject vote-many
```

- Press Enter and it should record your votes

The problem

\$PAC Investors and the \$PAC community are not fully aware of \$PAC-related projects since governance monitoring is only possible through a website service or through knowledge about the exact commands for the debug console integrated in the \$PAC wallet.

Currently masternode holders have to copy and paste a command from the proposals in order to vote on the specific proposal.

The solution

To increase transparency and awareness about \$PAC-related projects I am proposing to integrate the governance monitoring and voting system directly in the \$PAC wallet.

The user-friendly integration allows all user to sort and filter the proposal list. Double-clicking on a proposal will redirect the user to the URL where he can find more information about the desired proposal. A right-click opens a contextual menu where masternode holders can find vote buttons in addition to the button set provided on the bottom of the list, as well as the options to open the proposal homepage or the statistics website running by the innovation team, where you can find comments and the voting history.

The proposal

The governance monitoring and voting system is innovative and user-friendly. \$PAC will be the first cryptocurrency having this system implemented directly in the wallet. The system is almost finished and if this proposal gets funded, it will be released to GitHub as a pull-request to the official PACCommunity repository, so it can be merged and released by the core development team with the next wallet update.

The requested amount is 450.000 \$PAC for covering development time.

To approve the budget:

- Go to your wallet under Tools > Debug Console
- Copy and paste:

```
gobject vote-many 340cd07dae3877dcf25509d11b08a5d631e9db6552c38b1eb27f448f663eaa89 funding yes
```

- Press Enter and it should record your vote
